

SCOPE · RISK ADJUSTMENT PAYMENT INTEGRITY FOR PACE PROGRAMS

“What were we actually paid for this participant, and why did it change?”

The answer sits in files no one has time to open.

Scope reconciles what CMS and state payers actually paid you, participant by participant.

THE CHALLENGE

Two payers

PACE revenue is capitation from two payers for the frailest participants in the country. **Medicare and Medicaid capitation arrive separately and reconcile to nothing in common.**

Enrollment adjusts retroactively, and the frailty factor that lifts your entire Medicare rate depends on data you never see reported back.

FALCON'S SOLUTION

Reconciliation in both directions

All 70+ CMS files, encounter responses, PACE internal data, and public healthcare and public health data, turned into answers in minutes.

Overpayments you owe back

Found, documented, returned

Payment leakage you never see

Retroactive enrollment, dropped diagnoses

Participant by participant, across every file, with payment, clinical, submission, operational, market, and health economy context.

PROVEN OUTCOMES

\$80–\$160

Revenue recovery
PMPM impact

100%

File and data coverage
CMS files, PACE internal data, and public data

Minimal

Audit risk
An audit-ready record

Reconciliation engine

Align submissions, enrollment, payments, and evidence across CMS and state payer systems.

Market intelligence

Use public healthcare and public health data to understand provider, population, and health economy context.

Connected platform

Connect Scope into Sentinel, Helm, and Pulse for FWA, follow-up, provider, and utilization work.

EVERY FILE. EVERY PARTICIPANT. EVERY DOLLAR. RECONCILED.

Clinical, submission, operational, financial, CMS, public healthcare, and public health data connected in one command center.
